

Potential Mentee,

The Virginia Section of the ACS is offering a mentoring/mentee matching service in the chemical sciences. This service will help you in explore options for your career. Our goal is to (1) increase participation in the chemistry community, (2) increase awareness of the types of jobs available in the chemistry workforce and (3) help students realize their potential.

Examples of student questions: "What is your daily job like", "What income can I expect as a starting chemist?", "what skills from my student experience can I put on my resume?" and "what types of positions am I qualified for?"

It is not possible to provide a match for every student. Therefore, we do wish if you are chosen that you disseminate what you have learned to your chemistry affiliate/club colleagues and report back to the VA section your experience with the program.

Please provide us with the following information to best match you with a mentor. This process of matching may take up to one month. If selected, you will have one week to reply that you are still interested so make sure the information you provide is current and you check for a reply on a regular basis.
